

## Initial Data, May 5

Chemical(s)	iBDIL for DUVAS & SIFT (ppb)
Benzene	80 <sup>a</sup>
1,3-Butadiene	40 <sup>a</sup>
Ethylbenzene	350 <sup>b</sup>
Styrene	60 <sup>a</sup>
Toluene	70 <sup>a</sup>
Xylenes + Ethylbenzene	60 <sup>a</sup>

Exceedances of instantaneous baseline derived investigation levels (iBDIL) indicate concentrations that are higher than typical background levels for those chemicals and would necessitate further investigation for a source of the chemical. They are all set below levels that trigger actions based on concerns for health effects.
